## Campus Security + A.I.

### Detect Active Shooters, Faster

School violence is too frequently in the headlines. Unfortunately, tools have not existed to proactively fight back, leaving campuses more vulnerable and exposed to active shooter situations than ever intended.

Meet ReconaSense® Safe Campus, the award-winning security platform designed to modernize physical security for the education market. Through A.I. assistance, schools can automatically detect 'people of interest' as they approach a campus and respond accordingly through access control, video surveillance, mobile applications and mass notification.

ReconaSense Safe Campus has five main components:

#### 1. Integration Platform

There are usually telltale signs of trouble before a mass shooting, but tools to connect the dots have not existed. ReconaSense provides faculty with intelligence that can help prevent active shooter events, as well as mitigate damages when every second counts in an actual event. Integration of technologies include:

- Gunshot Detection
- Access Control
- Facial Recognition
- License Plate Recognition
- Mobile Devices
- Object Detection
- Mass Notification
- Real-Time Location
- Video Management

#### 2. A.I. Assist

Automatically detect 'persons of interest' along different pathways to violence, which triggers user-defined system responses. No longer rely on active monitoring to detect evolving threats or initiate emergency procedures.

#### 3. Mobile Operator

Create and share a common operating picture with local law enforcement, simplifying coordination and increasing visibility when it matters most. Users can manage dynamic situations on the move in real-time like never before.

### Key Benefits:

- Early Warnings
- Common Operating Picture
- Auto-Lockdown
- See something, Say something
- Mobile Muster
- Mobile Operation Center
- Threat Assessment
- Threat Management
- Coordinated Emergency Response

#### 4. Mobile Upstander

The "See Something, Say Something" app that empowers staff to centrally manage suspicions, as well as initiate emergency response from mobile devices. Transform staff from bystanders into upstanders, so nothing slips between the cracks.

#### 5. Mobile Muster

The app that helps ensure student safety. Once a staff member initiates an Active Shooter alert, push notifications arrive on each student's mobile device prompting a simple "Safe/Not Safe" response. Each student response pushes their GPS coordinates to operators and parents, ensuring quicker response while providing peace of mind.

## Safe Campus

ReconaSense Safe Campus uniquely integrates and communicates in real-time to mitigate damages.

## Making Sense of it All

At ReconaSense, we understand your security environment. Our team has the experience, knowledge and dedication to provide you with the security solutions you need. We have unparalleled technology that correctly identifies and alerts you to the operational activities you care about most.
